Nitrogen fertilization management can decrease methane emission from wetland rice fields of Central Vietnam

Hoang Thi Thai Hoa, Do Dinh Thuc, Trinh Thi Sen, Tran Thi Xuan Phuong
1. **Objective**: to assess the influence of rates and types of nitrogen application on CH$_4$ emission in the two rice cropping seasons in Central Vietnam.

2. **Materials and methods**

4 N rates (0, 40, 80 and 120 kg N/ha), 2 N types (Urea and ammonium chloride), rice cropping (summer season 2014 and spring season 2015), methane emission, alluvial soil, Thua Thien Hue province, Central Vietnam.
Results and conclusions

- The effect of inorganic fertilizer N on CH$_4$ emission depends on rate and type of N application.
- Further research should aim at quantifying the effects of it on N$_2$O emission and combining mitigation options.
