

Microdialysis:

A sensitive method for estimating plant-available N released during litter decomposition

Scott Buckley*

Richard Brackin

Susanne Schmidt

For each litter type:

Low N	0.02mg N g ⁻¹ soil
Medium N	0.2mg N g ⁻¹ soil
High N	1mg N g ⁻¹ soil

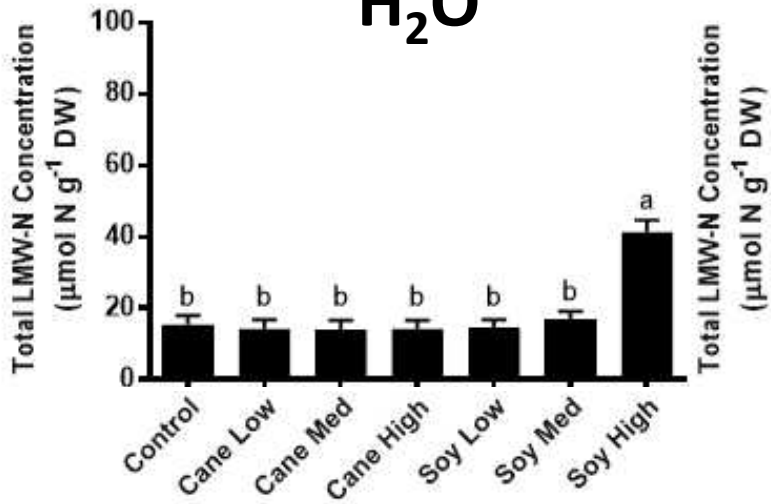

After 30 days incubation

**Microdialysis
H₂O and KCl Extractions**

**NH₄⁺ & Amino Acids (UPLC)
NO₃⁻ (Colourmetric Griess
reaction)**

H₂O
